PACT (Pre/post Adoption Consulting and Training) and Dr. Joyce Maguire Pavao present - The Boston/Cambridge Post Adoption Competency Training

for Clinicians and other Adoption Related Professionals

Using lecture, videos, classroom discussion, panel presentations, and consultations, this eight-month program is designed to help therapists develop the clinical sensitivity, and more important, competency needed to treat the mental health problems of children who come from a background of abuse and neglect and who are being raised in a family other than the birth family. The course emphasizes the development of a framework of understanding about the complexity of being a child or adult in a family by adoption and the therapeutic skills that will enable practitioners to work at the individual, couples, group, and family levels of clinical practice. Woven into each class is the impact that trauma, separation and loss-- as well as multiple moves --can have on children's development and wellbeing.
