CADASIL

Cerebral Autosomal Dominant Arteriopathy with Subcortical Infarcts and Leukoencephalopathy

CADASIL is a RARE, genetic, systemic, vascular disease. Neurological symptoms can include migraines, TIA's, mood disorders, seizures, stroke, and dementia. There is no treatment or cure for **CADASIL** the prevalence of **CADASIL** is not known as **CADASIL** is under diagnosed and often misdiagnosed as MS and/or other neurological disorders. www.cadasilfoundation.org

In the U.S., a disease is considered rare if it is believed to affect fewer than 200,000 Americans. There are approximately 6,800 such diseases, according to the National Institutes of Health (NIH). While each disease is rare, when considered together they affect nearly 30 million Americans or almost 1 in 10 people. There are certain challenges that all patients and families affected by rare diseases share.
