

NPO Partners with IIS

We are pleased to announce that we have recently entered into a partnership with Innovative Industrial Solutions (IIS). Under the terms of the cross distribution agreement that we have recently signed, IIS will represent NPO products across a portion of North America. This agreement will give NPO broader sales coverage in the North American commercial nuclear power industry and should increase the level of service that all of our customers will receive.

"IIS is a perfect partner for us," said NPO president Mike Fern. "Stan and his team know the industry well and have proven solutions to address ALARA challenges faced by nuclear plants." NPO's almost forty year history and breadth of product offerings coupled with IIS's market reach will allow both companies to better serve the industry's needs.

Stan Robinson, president and CEO of IIS is also bullish on the relationship. "In NPO, we see a company that shares the values important to us. They can provide a broad spectrum of radiation shielding solutions, which gives our customers options to choose from."

Implementation of this relationship will take place over the coming months, but regardless of whether your primary representative for our products is an NPO employee or an IIS sales representative, you will still have complete access to our design team and engineering know-how.

IIS (www.i-i-s.net), based in Russellville, Arkansas, has a history of nearly twenty years addressing ALARA issues in the nuclear industry through the intelligent use of telemetry, audio/visual technology, customized software and radiation shielding. NPO is a global provider of radiation shielding, contamination control products and engineered solutions to ALARA challenges. A wholly owned subsidiary of Eichrom Technologies LLC (www.eichrom.com), NPO maintains facilities in Lisle, Illinois and Rennes, France.
