

An Easier Way to Feed Your Plants

*This 'Fresh Idea' comes from Marianna Metke,
a master gardener and longtime Christianson's customer*

Here's a simple thing I've been doing for several years to make it much easier to use liquid feed regularly in the garden:

- Using a large plastic garbage can, I mix up a big batch of "blue goo" by dissolving granular 20-20-20 plant food in water (you could use whatever fertilizer formulation you prefer).
- Then all I need to do when I want to give my plants a little boost is dip a watering can into the premixed liquid to fill it, and I'm on my way to the garden!

Dip your watering can into pre-mixed plant food solution

I have several of these "fertilizer cans" stationed throughout my gardens to save time and steps.

This is SO much easier and less frustrating than mixing one watering can at a time, especially for those of us who have a lot of plants to feed.

If YOU have a favorite gardening tip or fresh idea you'd like to share with us, please email your submission to eve.christiansons@gmail.com and put 'Fresh Ideas' in the subject line of your email. You are also welcome to send your submissions to us via regular mail at: Christianson's Nursery – Attn: Eve Boe, 15806 Best Road, Mount Vernon, WA, 98273. Be sure to include your contact information (name, address, phone and/or email address) and please print clearly.
