

## **Slab and Log Processing Enhancements**

We have recently enhanced the processing capabilities at GL Veneer for our live edge and log product line. With the addition of a kiln and wide opening abrasive plane, we are well equipped to provide the highest quality rustic and live edge forest products.

**New NOVA kiln Installed December 2012**

Our new high capacity kiln can dry any types of wood products. With a programmable controller, the kiln can run an infinite number of drying “recipes”. With expert planning and tracking of drying schedules, this kiln gives us the ability to produce a wide variety of stable products ready for incorporation into your designs.

## **Slab and Log Processing Enhancements**

Our new Timesaver abrasive plane gives us a width capacity of 86" to perform surfacing of slabs. This equipment allows us to thickness plane huge slabs and hold a +/- tolerance of .005" from side to side. By changing belts from aggressive to passive, we can flatten and smooth slabs of enormous size. This adds significant value to live edge pieces for our customers will convert into works of art.

This Slab is 112" long & 80" across the ears of the crotch. It was sanded with 60x belt and came out nice and smooth with a +/- .005" thickness variance from side to side.
