

NUCLEAR POWER PLANT USERS GROUP FOCUSES ON LEAK PREVENTION

The *Fluid Leak Management Users Group (FLMUG)* will again hold their winter conference **January 14 - 18, 2013 at the Marriott Rivercenter, San Antonio, TX.**

FLMUG was organized as a technical forum comprised of users from the nuclear power plant industry, suppliers of sealing products and other interested parties. FSA and a number of FSA member companies actively support and participate in the *FLMUG*. Focus has been the sharing of technical information that will provide improvements or resolutions to sealing challenges facing the industry in a wide range of applications. *FLMUG* provides a mechanism for communicating state of the art knowledge about products, services, and best practices that can improve plant safety and sealing reliability. Membership eligibility is comprised of two (2) categories:

- Utilities or industries representing principal end- users of sealing products or services.
- Manufacturer, developers or distributors of sealing products or services

The winter meeting will also include programs for the air and motor operated valve users groups. The ultimate aim of all these programs is determination of plant performance base lines against which the progress of further improvements in sealing reliability can be measured. Both users and manufactures effectively engaged in this collaborative effort which will be on-going and thereby continue the success *FLUMG* has been enjoying since its inception.
