

## September excitement for Edmonton and the Edmonton Waste Management Centre of Excellence as Western Canada Water's Annual Conference begins on September 17<sup>th</sup>

Colleen Starchuk, EWMCE's Education and Training Lead, is a contributing member of the planning committee for the upcoming WCW's Conference "Liquid Assets." This dedicated team of industry professionals aim to make this year's WCW conference one to remember. The conference will highlight our growing understanding of the significance of our water resources. "From what I've seen so far," Colleen explains, "**Liquid Assets** will be a rich learning experience and a forum to further foster and protect Alberta's water resources."

EWMCE would like to profile a number of our collaborators who will be contributing to the Western Canada Water Conference, and invite you to get a glimpse of their good work.

### **Tuesday Workshop: *Managing Greenhouse Gas in Wastewater Treatment Plants*, Kentson Yan**

Kentson Yan is a Research Engineering Intern with EWMCE who will be a Ph.D. student (starting Fall 2013) in Environmental Engineering at the University of Alberta.

As a Post Graduate student at the University of Alberta he assisted in multiple studies in carbon accounting, life cycle assessments and greenhouse gas (GHG) emissions. Kentson intends to provide insight into using life cycle assessment methods to understand greenhouse gas emissions within a process stream.

This workshop is a 'must see' for anyone hoping to establish carbon credits.

### **Tuesday Workshop: *Source Control Strategies that Work*, Dave Johnston and Tanya Hunter**

Dave Johnston is a Senior Investigator with Regulatory Services in the City of Edmonton's Drainage Department. Tanya Hunter is an Environmental Technologist with the City of Edmonton. Both Dave and Tanya provided subject matter expertise for EWMCE's Source Control Course. With combined experience of close to 20 years administering Industrial Source Control Programs, Dave and Tanya will share some of the best management practices that they find to be successful. As lively presenters, never short on stories to share, Tanya and Dave are known for providing good insight and practical tips for success.

### **Tuesday Workshop: *Biosolids Management: Understanding Requirements & Options*, Allan Mumby**

Allan Mumby is the Biosolids Management Specialist at EPCOR Water Services and a highly valued instructor of EWMCE's Biosolids Management Course. Allan will provide insight into some of the emerging trends in biosolids management in Alberta, Canada and internationally, as well as the factors that drives and limits decision-making around Biosolids Management within Alberta. Allan's passion for and insight into this ever-evolving field is sure to open your mind to possibilities.

**At EWMCE we are proud of the work done together with the talented group of presenters highlighted above and we hope you have an opportunity to 'dig into' some of the interesting wisdom we know they will share in their sessions at the conference. And don't forget to stop by our booth. We are always eager to meet and interact with friends new and old whenever we get the opportunity.**
