

Did You Know?

Polina G

Do the hummingbird walk! Walk? Do the hummingbird shuffle!

Have you ever wondered about hummingbirds? Don't you always see them flying around? Well, did you know, that because hummingbirds are small and nimble, they cannot walk or hop? It's unbelievable! I guess their wings get tired then! A great deal of energy is spent flying, so hummingbirds have to feed almost constantly. But they can perch, and when they do, hummingbirds can only scoot sideways. It sort of looks like a side ways shuffle! Hummingbirds would rather fly than walk!

Meow to the power of 100; Woof to the power of ten!

You know how cats make all these different sounds? Meow! Mrow! Purr! Etc. And dogs don't make that much different sounds right? Well did you know that cats can produce over one hundred vocal sounds, while dogs can only produce about ten! Cats vocalize for a variety reasons. Just like humans, they make sounds when they're happy, angry, hungry, scared or even when they just want attention.
