

Medea Creeks Technology

By Olivia Campbell

Medea Creek is a successful school when it comes to academics, but is it up-to-date with its technology? Here at Medea Creek we have Smart boards, Apple computers, and even Smart-Response remotes used for testing (and more). Do we need to be worried about improving the schools technology? Will this schools technology hold us students back from working to the best of our ability? Is it an overall issue we students and teachers should be worried about?

“No.” says Melody, an eighth grader here at Medea Creek. “I don’t think it’s something we need to worry about, since the technology here at school is already pretty good. I wouldn’t want to change it.”

But others might have a different opinion. “I have a Smart board, Smart camera, Smart tablet, and laptop in my classroom. But if I could improve my classroom I would have more software integrated into the lessons to illustrate math concepts,” says Mr. Large, math teacher here at Medea Creek. If he could ask the school a question about our technology he would ask ‘How can we buy more math software (like geometry software) to help students comprehension?’

The Smart boards are tolerably new and the computers are very useful. But when it comes to changing and improving the schools technology it is all based on opinions. Some would say that there is no need in changing the schools technology. However, others might say that it would help students learn, and maybe even be a necessity to students learning.
