

WHY BUY QSUM'S GEL ICE PACKS?

When you buy a cold pack from QSUM you are buying a product that is **superior** in so many ways! QSUM Gel packs are a superior form of treatment because the non-toxic filling is safe and holds temperatures for longer. Gel ice packs are lightweight and comfortable, and the gel molds to the area of application for complete relief. They are pliable and very durable, ensuring that you receive the best value possible. The full color printed insert floats in the gel so the ink will not come in contact with the skin. Great for breast biopsies, cosmetic surgery, minor interventional procedures, etc.!

- ❖ **BENEFITS:** Ice will reduce bleeding, bruising, swelling, pain and inflammation, after an invasive procedure. The QSUM Gel Ice Pack is a low profile size (3" x 3" square) that is perfect for immediate use with the stereotactic biopsy systems (immediately after the procedure, remove compression and place several sterile 4x4's in the biopsy window. Then place the gel pack on top of the 4 x 4s and compress lightly.) **Ideal for use after Ultrasound, Stereotactic or MRI breast biopsies.**
- ❖ **PATIENT BENEFITS:** QSUM Gel Ice Packs provide the patient a discrete alternative to the bulky ice packs. The low profile design fits perfect under the patient's garments with comfort. They stay Flexible when frozen, and are a re-usable option for the patient.
- ❖ **FREE LOGO CUSTOMIZATION FOR P/N IP201:** QSUM offers our customers the ability to add a full color logo that is a printed insert that floats inside the gel. This assures you that ink cannot come in contact with the patient. We offer 3 different gel colors: Clear, Blue, and **PINK!**

This is a great way to promote your Breast Center with Free customization! Ensure your patients have a positive experience while marketing your facility!
