Chances are you drive by them every day or wrestle with them in your backyard. Non-native, invasive plant species such as Japanese knotweed or glossy buckthorn have become well established in our landscape but there are ways to control them or even eradicate them from your property.

Join Jeff Taylor, of Vegetation Control Services Inc., and Steve Roberge, Cheshire County Extension Forester UNH Cooperative Extension, for a discussion on identifying and controlling invasive plants found in the Monadnock Region.

This talk is free to the public and all are welcome to attend.

Sponsored by the Troy Conservation Commission and Cheshire County UNH Cooperative Extension.
