

Spotlight on LEID's Director of Products - Dave Malkan

Dave Malkan

Whether canyoneering or mountain biking in Moab, or hang gliding in Rio, or simply enjoying the open air on his motorcycle, LEID's Director of Products, Dave Malkan, has a passion for exploring! Dave loves to travel to new places and enjoys the activities that take him there. He even enjoys dancing...salsa, break, and swing! Fortunately for LEID Products, that passion for adventure and exploration has translated into a great aptitude for product development.

LEID Products has a long history with Dave. Just a young engineering student in January of 1997, Dave started his career at LEID's sister company Patti Engineering as a co-op student while studying to be an electrical engineer at Kettering University. Upon graduating, Dave was welcomed to the Patti Engineering team as a full-time electrical engineer.

Hanging in Rio

Dave's adventurous spirit led him to explore other opportunities with other companies for several years. Yet, he returned home to Patti Engineering and the newly formed LEID Products after meeting back up with the team at a wedding reception and discussing the new and exciting technologies we were developing. Dave's return to Patti Engineering to work with LEID Products brings opportunities and challenges that keep him inspired. Dave has excelled as Director of Products. He is responsible for design, implementation, and maintenance of LEID's biometric and controlled access systems for the secure storage and tracking of weapons, evidence, intellectual property (data), and pharmaceuticals.

Ready to Ride

"Dave's endless hours of dedication and his passion for getting the job done right, regardless of the obstacles, has been invaluable to our growing company", commented Sam Hoff, president of LEID Products. "We pride ourselves on offering superior technology with great service to back it up; Dave's leadership on product development and service to our customers plays an important role in our ability to meet those goals."

Dave shared his perspective on leading our product development team:

"Working with LEID from the ground up has been exciting, dynamic, and challenging! We have a great team that knows how to produce great products from vision to execution and so it is very satisfying to deliver such value added products as our BACS Evidence system to our customers."
