

The views expressed in the podcast are as of 2/28/2011, and are not intended as a forecast or as investment recommendations. Information provided as to the Fund's holdings, sector weightings, number of holdings, performance and expense ratios are as of dates described in the article and are subject to change at any time.

Investments in real estate investment trusts (REITs) and real-estate related securities involve special risks associated with an investment in real estate, such as limited liquidity and interest rate risks and may be more volatile than other securities. In addition, the value of REITs and other real estate-related investments is sensitive to changes in real estate values, extended vacancies of properties and other environmental and economic factors.

Investments in international markets present special risks including currency fluctuation, the potential for diplomatic political instability, regulatory and liquidity risks, foreign taxation and differences in auditing and other financial standards. Risks of foreign investing are generally intensified for investments in emerging markets.

An investment in an exchange-traded fund (ETF) generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange traded) that has the same investment objectives, strategies, and policies. The price of an ETF can fluctuate up or down, and the Fund could lose money investing in an ETF if the prices of the securities owned by the ETF go down. In addition, ETFs may be subject to the following risks that do not apply to conventional funds: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are delisted from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally.

The Fund may use derivative instruments. Derivatives are investments the value of which is "derived" from the value of an underlying asset (including an underlying security), reference rate or index. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative. Derivatives may be used to create synthetic exposure to an underlying asset or to hedge a portfolio risk. If the Fund uses derivatives to "hedge" the overall risk of its portfolio, it is possible that the hedge may not succeed. This may happen for various reasons, including unexpected changes in the value of the rest of the Fund's portfolio. Over the counter derivatives are also subject to counterparty risk, which is the risk that the other party to the contract will not fulfill its contractual obligation to complete the transaction with the Fund.

The Fund may engage in short selling activities, which are significantly different from the investment activities commonly associated with conservative stock funds. Positions in shorted securities are speculative and more risky than "long" positions (purchases) because the cost of the replacement security is unknown.

The views expressed in this article are those of the participants as of a specific date, and are not intended as a forecast or as investment recommendations. Information provided with respect to the Fund's Portfolio Holdings, Sector Weightings, Number of Holdings, Performance and Expense Ratios are as of the dates described in the article and are subject to change at any time.

You should carefully consider the investment objectives, potential risks, management fees, and charges and expenses of the Fund before investing. The Fund's prospectus contains this and other information about the Fund, and should be read carefully before investing. You may obtain a current copy of the Fund's prospectus by calling 1-877-747-4268. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost.
