

**FOR IMMEDIATE RELEASE**

RENOWNED ARCHAEOLOGIST DR. SCI. SAM SEMIR OSMANAGICH LOCAL LECTURE SERIES  
Discovered Bosnian Valley of the Pyramids and Foreign Member of the  
Russian Academy of Natural Sciences  
**Are the Bosnian Pyramids the Discovery of this Generation?**

**Tuesday, March 29; 7:00PM – Open to Public @ Maggie Walker Governor's School, Richmond, VA**  
**Wednesday, March 30 – Williamsburg, VA**  
**Thursday, March 31 – Richmond, VA**

Bridging Boundaries International welcomes internationally recognized archaeologist, Dr. Sam Semir Osmanagich to lecture on his discoveries of the first pyramids in Europe. Although criticized by some of his fellow scientists, Dr. Osmanagich continues to move forward with his controversial research. Touted as the oldest manmade structures, the Bosnian Valley of the Pyramids, along with its concrete, stone blocks and primitive inscriptions, has proven to be over twelve thousand years old.

Dr. Osmanagich and his team are currently working to unearth passageways throughout the Bosnian Pyramid of the Sun and labyrinths within the Pyramid of the Moon since his initial findings in 2005. The Bosnian Valley of the Pyramids in Visoko, Bosnia-Herzegovina is a grouping of five of the largest stone buildings crafted by man. Connected by an ancient underground network and deliberately oriented to the cardinal points, these historic monuments have been drawing scientists, anthropologists and tourists alike. Arguably the most influential aspect of this new discovery is its positive effect on the local Bosnian community. Volunteers from all cultural backgrounds are working together to unearth the secrets of their common history. Many of Dr. Osmanagich's critics believe these structures were actually created by shifting tectonic plates and the earth's natural movement over centuries.

However, an overwhelming amount of support has materialized as tourists and volunteers swarm through the area. Journalists spanning the globe report on the very real affect that Dr. Osmanagich's research continues to have on local history as well as international understanding of our world. It's only natural to question or doubt theories that interfere with our age-old traditions. But the truth is, humans used to believe earth to be flat and space exploration impossible; by simply reporting his discoveries, Dr. Osmanagich may be changing world history as we know it. Among his worldwide tour of twelve countries, Dr. Osmanagich will be visiting Virginia to conduct a brief series of lectures emphasizing the magnitude of this research, the most recent findings of his non-profit foundation "Archaeological Park: Bosnian Pyramid of the Sun", and his new book, "Pyramids around the World."
