

# DESIGN OF PILOT STUDIES

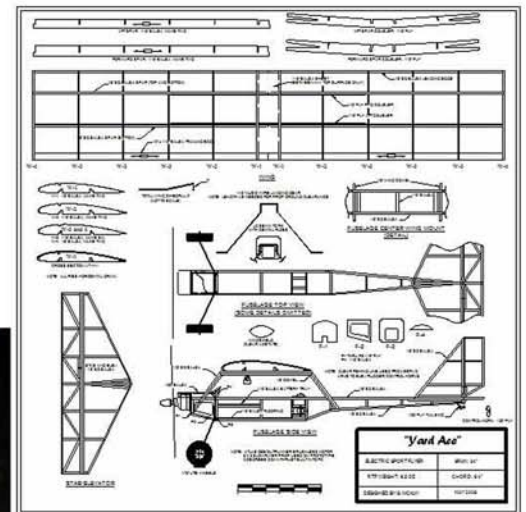

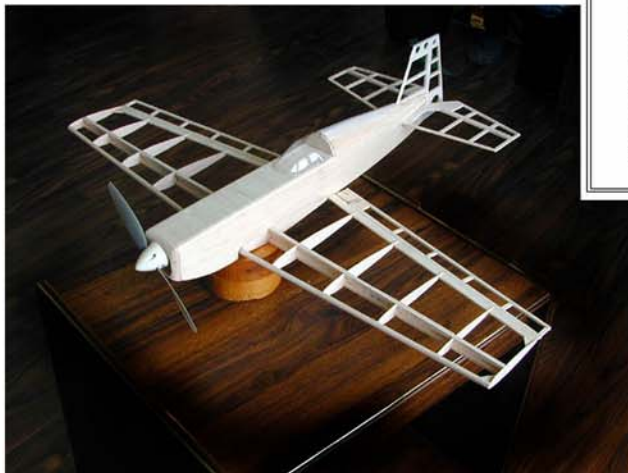

MCRC Workshop Series

Friday, May 31, 2013

9:00am - 11:00am

Ryals 107

This seminar will focus on how to write specific aims and to propose analyses that are appropriate for pilot studies. The seminar will emphasize that pilot studies are primarily focused upon feasibility of proposed research (can it be done?), ability to recruit (can you get the subjects?), and ability to collect data (can you measure your outcome?). The seminar will also focus on how well conducted pilot studies can springboard to larger research applications. The seminar is designed for new investigators (doctoral students, post-doctoral fellows and junior faculty) who are preparing pilot study applications. Please address questions to Drs. David Redden ([dredden@uab.edu](mailto:dredden@uab.edu)) or Jennifer Croker ([jcroker@uab.edu](mailto:jcroker@uab.edu)).
