

To reduce the possibility of your child suffering painful and possibly disabling injuries, the American Chiropractic Association (ACA) and its Council on Occupational Health offer the following tips:

- If children and adults in your home share the same computer workstation, make certain that the workstation can be modified for each child's use.
- Position the computer monitor so the top of the screen is at or below the child's eye level. This can be accomplished by taking the computer off its base or stand, or having the child sit on firm pillows or phone books to reach the desired height.
- Make sure the chair at the workstation fits the child correctly. An ergonomic back cushion, pillow or a rolled-up towel can be placed in the small of the child's back for added back support. There should be two inches between the front edge of the seat and the back of the knees. The chair should have arm supports so that elbows are resting within a 70- to 135-degree angle to the computer keyboard.
- Wrists should be held in a neutral position while typing - not angled up or down. The mousing surface should be close to the keyboard so your child doesn't have to reach or hold the arm away from the body.
- The child's knees should be positioned at an approximate 90- to 120-degree angle. To accomplish this angle, feet can be placed on a foot rest, box, stool or similar object.
- Reduce eyestrain by making sure there is adequate lighting and that there is no glare on the monitor screen. Use an antiglare screen if necessary.
- Limit your child's time at the computer and make sure he or she takes periodic stretch breaks during computing time. Stretches can include: clenching hands into fists and moving them in 10 circles inward and 10 circles outward; placing hands in a praying position and squeezing them together for 10 seconds and then pointing them downward and squeezing them together for 10 seconds; spreading fingers apart and then closing them one by one; standing and wrapping arms around the body and turning all the way to the left and then all the way to the right.
- Your child's muscles need adequate hydration to work properly and avoid injury. Encourage your child to drink four 8-ounce glasses of water a day. Carbonated beverages, juices and other sweet drinks are not a substitute.
- Urge your child's school or PTA officials to provide education on correct computer ergonomics and to install ergonomically correct workstations.

"If your child continues to complain of pain and strain from sitting at a computer, see a doctor of chiropractic," urges Dr. Bautch. "A chiropractor can help alleviate your child's pain and help prevent further injury."
