- Pressure-limiting valve
- Double mechanical float system
- Cooling coil
- Optional coffee brewer top

Cooler Mounted Sanitizer

- 100 mg OZONE generator
- 12 Volt

What Is OZONE?

OZONE is a form of oxygen produced by the interaction of oxygen and electricity. It is a strong oxidizing agent used for sterilizing air and water.

First used to purify drinking water in Europe over 100 years ago, OZONE's unique characteristics make it ideally suited for a variety of water and air treatment applications. OZONE assures you of the cleanest and safest water you can get. Sanitizing with OZONE is an extremely efficient, safe, fast and easy way to sanitize coolers on location.
